## HARDY PERENNIAL PLANTS FOR SEASON 1956

All wild flowers in this list have been grown from seed, division, or cuttings. All are grown under ordinary nursery conditions exactly like any other perennials. Those loving shade are grown under lattice. Some, like trailing arbutus, twinflower and dwarf cornell are grown in containers in order that the root system will be less disturbed in moving. Collected plants do not have the compact root system of the nursery grown plant.

All orders will be filled with freshly dug plants.

We guarantee all plants to be true to name. Errors made by us will be gladly rectified if given proper notice. If any plants are found to be mis-named, we will replace them the next planting season or the original price will be refunded.

A certificate of inspection is attached to each shipment.

Five of one variety may be purchased for the price of four. We will quote quantity rates to gardeners or landscaps architects who wish to buy in quantity for landscaping or naturalizing. Michigan residents add 3 % sales tax.

On orders \$2.00 or less, please add 25¢ to help cover postage and packing. On orders over \$2.00, please add 10% . Express orders will be sent collect.

We wish to contact persons who collect or could collect seeds of native wild flowers or other rare plants. Seed should be properly ripened and true to name.

American Perennial Gardens is located at 7050 North Venoy Road, (between Ford and Warren Roads ) Garden City. Venoy Road is four miles west of Telegraph Road, U.S. 24.

Direct all mail to P.O. Box 37, Garden City, Phone Logan 1-0712.

Send names and addresses of interested garden friends and we will gladly send them our lists.

The garden will be open for retail trade on Saturday and Sunday only. Visitors will be welcome on those days.

We are often asked to give the soil reaction (pH) preferences of certain wild flowers. To answer that question we will give our experience here. Drainage, moisture, temperature, light, air circulation, fertility, and soil texture appear to be the controlling factors in where a plant grows. Meet these requirements and forget (pH) preferences.
